AMENDMENTS TO THE CLAIMS

The following listing of claims will replace all prior versions, and listings, of claims in this application.

Listing of Claims:

Claim 1 (currently amended): A wrapping body comprising:
an interlabial pad worn between labia; and
an individual wrapping container for wrapping ~~individually each one of said~~
interlabial pad,
wherein said individual wrapping container is provided with an unwrapping
portion for unwrapping,
wherein said container has a shape developable from the unwrapping portion,
and
wherein said container has an enough size to enclose a used interlabial pad in
a developed state, and
wherein said individual wrapping container comprises a series of superposing
wrapping sheets, each sheet comprising two ends and being wrapped in a way to
form an overlapping part where the both ends of the wrapping sheet and a vicinity of
the both ends are overlapped each other, and
wherein said superposing wrapping sheets have fine protrusions on inner
surfaces of the wrapping sheets to space away from each other.

Claim 2 (currently amended): The wrapping body according to claim 1,
~~wherein said individual wrapping container comprises a series of wrapping~~
~~sheet superposing each other, the sheet comprising two ends and being wrapped in a~~
~~way to form an overlapping part where the both ends of the wrapping sheet and a~~
~~vicinity of the both ends are overlapped each other,~~
wherein said unwrapping portion is ~~formed~~ configured to unwrap said

individual wrapping container by releasing an overlapping state of the overlapping part; and

wherein said wrapping sheet turns to be a waste discarding sheet for enclosing a used interlabial pad in a state that said wrapping container is developed after unwrapping said individual wrapping container.

Claim 3 (canceled).

Claim 4 (previously presented): The wrapping body according to claim 2, wherein said wrapping sheet comprises an inner face to be in contact with the interlabial pad to be wrapped and an outer face to be held by the wearer; the wrapping body comprising

a bent portion bent toward a side of said inner face provided in a vicinity of one end of the two ends of said wrapping sheet in the longitudinal direction,

wherein said bent portion forms a pocket portion capable of receiving said used interlabial pad.

Claim 5 (Original): The wrapping body according to claim 4, wherein said wrapping sheet is folded in a way to have one or more folded portions where a part of said wrapping sheet is bent toward a side of said inner face near an end opposite to the end where said pocket portion is provided;

wherein said used interlabial pad can be wrapped with said waste discarding sheet including, as a part of said waste discarding sheet, said folded portions that are developed in a state after said individual wrapping container is unwrapped and developed; and

wherein said pocket portion can receive said used interlabial pad that is wrapped with said part of said waste discarding sheet.

Claim 6 (previously presented): The wrapping body according to claim 4, wherein a dimension of an opening of said pocket is longer than a dimension of a bottom of said pocket.

Claim 7 (currently amended): A wrapping body comprising:
an interlabial pad worn between labia; and
an individual wrapping container for wrapping individually each one of said
interlabial pad,

wherein said individual wrapping container is provided with an unwrapping portion for unwrapping, and a shape developable from the unwrapping portion; and
wherein said individual wrapping container comprises an elongated area; and
wherein said individual wrapping container turns to be of a size to enclose a used interlabial pad in a developed state by extending said elongated area, and

wherein said individual wrapping container comprises a series of superposing wrapping sheets, each sheet comprising two ends and being wrapped in a way to form an overlapping part where the both ends of the wrapping sheet and a vicinity of the both ends are overlapped each other, and

wherein said superposing wrapping sheets have fine protrusions on inner surfaces of the wrapping sheets to space away from each other.

Claim 8 (Original): The wrapping body according to claim 7, wherein said elongated area is formed by an emboss processing.

Claim 9 (previously presented): The wrapping body according to claim 1, wherein said unwrapping portion of said individual wrapping container is provided with a sealing means that is re-sealable.

Claim 10 (previously presented): The wrapping body according to claim 1,
wherein said interlabial pad is contained in a bent state before said individual
wrapping container is developed; and

wherein said used interlabial pad is contained in a developed state when said individual wrapping container is developed to enclose said used interlabial pad.

5

Docket No.: 20050/0200480-USO

Claim 11 (previously presented): The wrapping body according to claim 1, wherein said interlabial pad is provided with a finger insertion opening, in which a finger can be inserted, on an opposite side face to a body side face; and wherein said finger insertion opening is disposed near said unwrapping portion of said individual wrapping container; and

wherein the finger insertion opening of said contained interlabial pad can be exposed naturally at a beginning of unwrapping the individual wrapping container when said individual wrapping container is unwrapped.

Claim 12 (currently amended): The wrapping body according to claim 31, wherein said wrapping sheet comprises an inner face to be in contact with the interlabial pad to be wrapped and an outer face to be held by the wearer; the wrapping body comprising

a bent portion bent toward a side of said inner face provided in a vicinity of one end of the two ends of said wrapping sheet in the longitudinal direction,

wherein said bent portion forms a pocket portion capable of receiving said used interlabial pad.

Claim 13 (previously presented): The wrapping body according to claim 5, wherein a dimension of an opening of said pocket is longer than a dimension of a bottom of said pocket.

Claim 14 (previously presented): The wrapping body according claim 2, wherein said unwrapping portion of said individual wrapping container is provided with a sealing means that is re-sealable.

Claim 15 (currently amended): The wrapping body according claim 31, wherein said unwrapping portion of said individual wrapping container is provided with a sealing means that is re-sealable.

6

Docket No.: 20050/0200480-US0

Claim 16 (previously presented): The wrapping body according to claim 2, wherein said interlabial pad is contained in a bent state before said individual wrapping container is developed; and

wherein said used interlabial pad is contained in a developed state when said individual wrapping container is developed to enclose said used interlabial pad.

Claim 17 (currently amended): The wrapping body according to claim 3, wherein said interlabial pad is contained in a bent state before said individual wrapping container is developed; and

wherein said used interlabial pad is contained in a developed state when said individual wrapping container is developed to enclose said used interlabial pad.

Claim 18 (previously presented): The wrapping body according to claim 2, wherein said interlabial pad is provided with a finger insertion opening, in which a finger can be inserted, on an opposite side face to a body side face; and

wherein said finger insertion opening is disposed near said unwrapping portion of said individual wrapping container; and

wherein the finger insertion opening of said contained interlabial pad can be exposed naturally at a beginning of unwrapping the individual wrapping container when said individual wrapping container is unwrapped.

Claim 19 (previously presented): The wrapping body according to claim 3, wherein said interlabial pad is provided with a finger insertion opening, in which a finger can be inserted, on an opposite side face to a body side face; and

wherein said finger insertion opening is disposed near said unwrapping portion of said individual wrapping container; and

wherein the finger insertion opening of said contained interlabial pad can be exposed naturally at a beginning of unwrapping the individual wrapping container when said individual wrapping container is unwrapped.
